

## PH212 Overview

### Syllabus

- grade breakdown

- calendar

- late policies

### Pre-lecture assignments

- due 1 hour before class

- available for submission for at least 48 hours

### Zoom lectures

- posted in Learning Materials 2 hours after end of lecture

### Participation assignments

- in-class using Poll Everywhere

- asynchronous

- posted in Canvas 2 hours after end of lecture

- due in 2 days+

### Homework

- available in Canvas

- answers posted 1 week after due date

### Quizzes

- Zoom at class time and also at 6pm

- Canvas using Proctorio open for 48 hours

- notes required, due before you start your quiz

- extra credit available after scores are posted

### Final exam

- similar format to quizzes

### Lab (see next page)

## Lab

Email the instructor for lab opt-outs if you previously have taken the course and passed the lab component: see Course Information module for details

PH 212 labs are completed individually at home using accessible materials. At the end of each week, students work with their lab group to compare data, discuss results, and submit a group report.

To be assigned to a lab group and matched with a TA, students should complete the following assignments this week (recommended order):

Course Introduction Discussion Post

Lab Values Survey

Lab 1 Discussion Post

Lab 1 Report (Individual)

In the Course Introduction Discussion Post, students should introduce themselves and clearly state the days and times they are generally available to work on lab experiments and group reports. Students from previous terms consistently report that having group members with similar schedules makes collaboration much easier. Encourage students to provide detailed availability and use the CTRL+F search feature to find classmates with similar schedules.

Form a lab group in the “People” tab as explicitly outlined in the “course Introductions” page. Once students have joined a group, they should complete the group's shared Google Doc with their weekly availability. This document will be used to identify times for group meetings and weekly meetings with their TA.

The Lab 1 Discussion Post is due on Thursday, so students should fill out their availability as soon as possible and be as accurate as they can. If there are scheduling conflicts, it is important to identify them early. We use the availability documents to move students between groups when necessary, so completing the document is an important part of the group formation process.

If any issues arise with group formation or scheduling, please let the Lead TA know as soon as possible.
